

**TABLE A-1. SURFACE SOIL REMEDIATION GUIDELINE VALUES FOR NATURAL AREA LAND USE - ALL EXPOSURE PATHWAYS**

This table must **not** be used for Tier 1 assessment and remediation, unless required due to land use considerations (see Sections 3.2 and 5.1.1). Tier 1 soil guidelines are found in Tables 1, 3 and 4. This table is provided to assist Tier 2 guideline development, using the procedures outlined in the companion Tier 2 document (ESRD 2007 as amended).

Receptor	Overall Guideline		Human		Ecological								Other

**TABLE A-1. SURFACE SOIL REMEDIATION GUIDELINE VALUES FOR NATURAL AREA LAND USE - ALL EXPOSURE PATHWAYS**

This table must **not** be used for Tier 1 assessment and remediation, unless required due to land use considerations (see Sections 3.2 and 5.1.1). Tier 1 soil guidelines are found in Tables 1, 3 and 4. This table is provided to assist Tier 2 guideline development, using the procedures outlined in the companion Tier 2 document (ESRD 2007 as amended).

Notes:

a. For more information see *Guidelines for Landfill Disposal of Sulphur Waste and Remediation of Sulphur Containing Soils* (AENV, 2011)

**TABLE A-1. SURFACE SOIL REMEDIATION GUIDELINE VALUES FOR NATURAL AREA LAND USE - ALL EXPOSURE PATHWAYS**

**This table must not be used for Tier 1 assessment and remediation**, unless required due to land use considerations (see Sections 3.2 and 5.1.1). Tier 1 soil guidelines are found in Tables 1, 3 and 4. This table is provided to assist Tier 2 guideline development, using the procedures outlined in the companion Tier 2 document (ESRD 2007 as amended).

- b. True total barium as measured by fusion-XRF or fusion-ICP. For more information see Soil Remediation Guidelines for Barite: Environmental Health and Human Health (AENV, 2009)
- c. The Index of Additive Cancer Risk (IACR) is calculated by dividing the soil concentration of each carcinogenic PAH by its Protection of Domestic Use Aquifer guideline value to calculate a hazard index for each PAH and subsequently summing the hazard indexes for the entire PAH mixture, as follows:

Fine Soil:

$$IACR = \frac{[Benz(a)anthracene]}{6,4} + \frac{[Benzo(b + j)fluoranthene]}{3,0} + \frac{[Benzo(k)fluoranthene]}{0,64} + \frac{[Benzo(g, h, i)perylene]}{130} + \frac{[Benzo(a)pyrene]}{7,0} + \frac{[Chrysene]}{40} + \frac{[Dibenz(a, h)anthracene]}{4,4} + \frac{[Indeno(1,2,3 - c, d)pyrene]}{51}$$

Coarse Soil:

$$IACR = \frac{[Benz(a)anthracene]}{12} + \frac{[Benzo(b + j)fluoranthene]}{5,8} + \frac{[Benzo(k)fluoranthene]}{1,2} + \frac{[Benzo(g, h, i)perylene]}{250} + \frac{[Benzo(a)pyrene]}{14} + \frac{[Chrysene]}{78} + \frac{[Dibenz(a, h)anthracene]}{8,5} + \frac{[Indeno(1,2,3 - c, d)pyrene]}{98}$$

- d. Overall guideline value for ecological receptors only.
- e. Guideline for protection of aquatic life is below detection limit, groundwater monitoring is required.
- f. Expressed as toxic equivalents (TEQs) based on 2,3,7,8-PCDD (See CCME, 1999 and updates)
- g. Guideline values adopted directly from CCME (1999 and updates) without change.
- h. Analytical methodology specified in the *Soil and Groundwater Remediation Guidelines for Monoethanolamine and Diethanolamine* (AENV, 2010), or equivalent, must be used. See AENV (2010) for further details.
- i. Eco-contact guidelines from Stantec (2012)
- j. Eco-contact guidelines from Stantec (2008)
- k. Boron must be measured in a saturated paste extract prepared in accordance with Method 15.2.1 (Carter and Gregorich, 2008)
- l. Guideline for protection of aquatic life (fine soil) is based on a groundwater guideline of 0.10 g/L. See Appendix B for more information.

BDL - Below detection limit

NGR - no guideline required, calculated value >1,000,000 mg/kg; or for PAH groundwater protection, calculated value results in groundwater concentration greater than solubility

**TABLE A-2. SURFACE SOIL REMEDIATION GUIDELINE VALUES FOR AGRICULTURAL LAND USE - ALL EXPOSURE PATHWAYS**

This table must **not** be used for Tier 1 assessment and remediation, unless required due to land use considerations (see sections on Land Use and Land Use and Sensitivity Factors). Tier 1 soil guidelines are found in Table 1, 3 and 4.

This table is provided to assist Tier 2 guideline development, using the procedures outlined in the companion Tier 2 document (ESRD 2007 as amended).

Notes:

- a. For more information see Guidelines for Landfill Disposal of Sulphur Waste and Remediation of Sulphur Containing Soils (AENV, 2011)
- b. True total barium as measured by fusion-XRF or fusion-ICP. For more information see Soil Remediation Guidelines for Barite: Environmental Health and Human Health (AENV, 2009)
- c. Human health direct soil contact guidelines for carcinogenic PAHs are based on B[a]P Total Potency Equivalents (TPE). TPEs are calculated by multiplying the soil concentration of individual carcinogenic PAHs by a standardized Benzo[a]pyrene Potency Equivalence Factor (PEF) to produce a Benzo[a]pyrene relative potency concentration, and by subsequently summing the relative potency concentrations for the entire PAH mixture. B[a]P PEFs are order of magnitude estimates of carcinogenic potential and are based on the World Health Organization (WHO/IPCS, 1998) scheme, as follows:

**TABLE A-2. SURFACE SOIL REMEDIATION GUIDELINE VALUES FOR AGRICULTURAL LAND USE - ALL EXPOSURE PATHWAYS**

This table must **not** be used for Tier 1 assessment and remediation, unless required due to land use considerations (see sections on Land Use and Land Use and Sensitivity Factors). Tier 1 soil guidelines are found in Table 1, 3 and 4.

This table is provided to assist Tier 2 guideline development, using the procedures outlined in the companion Tier 2 document (ESRD 2007 as amended).

Carcinogenic PAH	PEF
Benz[a]anthracene	0.1
Benzo(b+j)fluoranthene	0.1
Benzo[k]fluoranthene	0.1
Benzo[ghi]perylene	0.01
Benzo[a]pyrene	1
Chrysene	0.01
Dibenz[a,h]anthracene	1
Indeno[1,2,3-c,d]pyrene	0.1

d. The B[a]P Total Potency Equivalents (TPEs) calculated for specific soil samples using Potency Equivalency Factors (PEFs) should be multiplied by an Uncertainty Factor of 3 when evaluating PAH mixtures associated with creosote or coal tar-type environmental releases, prior to evaluating against the human health direct contact soil remediation guideline.

e. The Index of Additive Cancer Risk (IACR) is calculated by dividing the soil concentration of each carcinogenic PAH by its Protection of Domestic Use Aquifer guideline value to calculate a hazard index for each PAH and subsequently summing the hazard indexes for the entire PAH mixture, as follows:

Fine Soil:

$$IACR = \frac{[Benz(a)anthracene]}{6.4} + \frac{[Benzo(b + j)fluoranthene]}{3.0} + \frac{[Benzo(k)fluoranthene]}{0.64} + \frac{[Benzo(g, h, i)perylene]}{130} + \frac{[Benzo(a)pyrene]}{7.0} + \frac{[Chrysene]}{40} + \frac{[Dibenz(a, h)anthracene]}{4.4} + \frac{[Indeno(1,2,3 - c, d)pyrene]}{51}$$

Coarse Soil:

$$IACR = \frac{[Benz(a)anthracene]}{12} + \frac{[Benzo(b + j)fluoranthene]}{5.8} + \frac{[Benzo(k)fluoranthene]}{1.2} + \frac{[Benzo(g, h, i)perylene]}{250} + \frac{[Benzo(a)pyrene]}{14} + \frac{[Chrysene]}{78} + \frac{[Dibenz(a, h)anthracene]}{8.5} + \frac{[Indeno(1,2,3 - c, d)pyrene]}{98}$$

- f. Overall guideline value for ecological receptors only.
- g. Guideline for protection of aquatic life or irrigation water is below detection limit, groundwater monitoring is required.
- h. Expressed as toxic equivalents (TEQs) based on 2,3,7,8-PCDD (See CCME, 1999 and updates)
- i. Guideline values adopted directly from CCME (1999 and updates) without change.
- j. Analytical methodology specified in the Soil and Groundwater Remediation Guidelines for Monoethanolamine and Diethanolamine (AENV, 2010), or equivalent, must be used. See AENV (2010) for further details.
- k. Eco-contact guidelines from Stantec (2012)
- l. Eco-contact guidelines from Stantec (2008)
- m. Boron must be measured in a saturated paste extract prepared in accordance with Method 15.2.1 (Carter and Gregorich, 2008)
- n. Guideline for protection of aquatic life (fine soil) is based on a groundwater guideline of 0.10 g/L. See Appendix B for more information

BDL - Below detection limit

NGR - no guideline required, calculated value >1,000,000 mg/kg; or for PAH groundwater protection, calculated value results in groundwater concentration greater than solubility.

**TABLE A-3. SURFACE SOIL REMEDIATION GUIDELINE VALUES FOR RESIDENTIAL/PARKLAND LAND USE - ALL EXPOSURE PATHWAYS**

This table must **not** be used for Tier 1 assessment and remediation, required due to land use considerations (see Sections 3.2 and 5.1.1). Tier 1 soil guidelines are found in Tables 1, 3 and 4.

This table is provided to assist Tier 2 guideline development, using the procedures outlined in the companion Tier 2 document (ESRD 2007 as amended).

Notes:

- a. For more information see Guidelines for Landfill Disposal of Sulphur Waste and Remediation of Sulphur Containing Soils (AENV, 2011)
- b. True total barium as measured by fusion-XRF or fusion-ICP. For more information see Soil Remediation Guidelines for Barite: Environmental Health and Human Health (AENV, 2009)

**TABLE A-3. SURFACE SOIL REMEDIATION GUIDELINE VALUES FOR RESIDENTIAL/PARKLAND LAND USE - ALL EXPOSURE PATHWAYS**

This table must **not** be used for Tier 1 assessment and remediation, required due to land use considerations (see Sections 3.2 and 5.1.1). Tier 1 soil guidelines are found in Tables 1, 3 and 4.

This table is provided to assist Tier 2 guideline development, using the procedures outlined in the companion Tier 2 document (ESRD 2007 as amended).

- c. Human health direct soil contact guidelines for carcinogenic PAHs are based on B[a]P Total Potency Equivalents (TPE). TPEs are calculated by multiplying the soil concentration of individual carcinogenic PAHs by a standardized Benzo[a]pyrene Potency Equivalence Factor (PEF) to produce a Benzo[a]pyrene relative potency concentration, and by subsequently summing the relative potency concentrations for the entire PAH mixture. B[a]P PEFs are order of magnitude estimates of carcinogenic potential and are based on the World Health Organization (WHO/IPCS, 1998) scheme, as follows:

Carcinogenic PAH Compound	PEF
Benz[a]anthracene	0.1
Benzo(b+j)fluoranthene	0.1
Benzo[k]fluoranthene	0.1
Benzo[ghi]perylene	0.01
Benzo[a]pyrene	1
Chrysene	0.01
Dibenz[a,h]anthracene	1
Indeno[1,2,3-c,d]pyrene	0.1

- d. The B[a]P Total Potency Equivalents (TPEs) calculated for specific soil samples using Potency Equivalency Factors (PEFs) should be multiplied by an Uncertainty Factor of 3 when evaluating PAH mixtures associated with creosote or coal tar-type environmental releases, prior to evaluating against the human health direct contact soil remediation guideline.
- e. The Index of Additive Cancer Risk (IACR) is calculated by dividing the soil concentration of each carcinogenic PAH by its Protection of Domestic Use Aquifer guideline value to calculate a hazard index for each PAH and subsequently summing the hazard indexes for the entire PAH mixture. For example, the IACR for coarse textured soil would be calculated as follows:

Fine Soil:

$$IACR = \frac{[Benz(a)anthracene]}{6.4} + \frac{[Benzo(b+j)fluoranthene]}{3.0} + \frac{[Benzo(k)fluoranthene]}{0.64} + \frac{[Benzo(g,h,i)perylene]}{130} + \frac{[Benzo(a)pyrene]}{7.0} + \frac{[Chrysene]}{40} + \frac{[Dibenz(a,h)anthracene]}{4.4} + \frac{[Indeno(1,2,3-c,d)pyrene]}{51}$$

Coarse Soil:

$$IACR = \frac{[Benz(a)anthracene]}{12} + \frac{[Benzo(b+j)fluoranthene]}{5.8} + \frac{[Benzo(k)fluoranthene]}{1.2} + \frac{[Benzo(g,h,i)perylene]}{250} + \frac{[Benzo(a)pyrene]}{14} + \frac{[Chrysene]}{78} + \frac{[Dibenz(a,h)anthracene]}{8.5} + \frac{[Indeno(1,2,3-c,d)pyrene]}{98}$$

- f. Overall guideline value for ecological receptors only.
- g. Guideline for protection of aquatic life is below detection limit, groundwater monitoring is required.
- h. Expressed as toxic equivalents (TEQs) based on 2,3,7,8-PCDD (See CCME, 1999 and updates)
- i. Guideline values adopted directly from CCME (1999 and updates) without change.
- j. Analytical methodology specified in the Soil and Groundwater Remediation Guidelines for Monoethanolamine and Diethanolamine (AENV, 2010), or equivalent, must be used. See AENV (2010) for further details.
- k. Eco-contact guidelines from Stantec (2012)
- l. Eco-contact guidelines from Stantec (2008)
- m. Boron must be measured in a saturated paste extract prepared in accordance with Method 15.2.1 (Carter and Gregorich, 2008)
- n. Guideline for protection of aquatic life (fine soil) is based on a groundwater guideline of 0.10 g/L. See Appendix B for more information

BDL - Below detection limit

NGR - no guideline required, calculated value >1,000,000 mg/kg; or for PAH groundwater protection, calculated value results in groundwater concentration greater than solubility

**TABLE A-4. SURFACE SOIL REMEDIATION GUIDELINE VALUES FOR COMMERCIAL LAND USE - ALL EXPOSURE PATHWAYS**

This table must **not** be used for Tier 1 assessment and remediation, required due to land use considerations (see Sections 3.2 and 5.1.1). Tier 1 soil guidelines are found in Tables 1, 3 and 4.

Notes:

- a. For more information see Guidelines for Landfill Disposal of Sulphur Waste and Remediation of Sulphur Containing Soils (AENV, 2011)
- b. True total barium as measured by fusion-XRF or fusion-ICP. For more information see Soil Remediation Guidelines for Barite: Environmental Health and Human Health (AENV, 2009)
- c. Human health direct soil contact guidelines for carcinogenic PAHs are based on B[a]P Total Potency Equivalents (TPE). TPEs are calculated by multiplying the soil concentration of individual carcinogenic PAHs by a the standardized Benzo[a]pyrene Potency Equivalence Factor (PEF) to produce a Benzo[a]pyrene relative potency concentration, and by subsequently summing the relative potency concentrations for entire PAH mixture. B[a]P PEFs are order of magnitude estimates of carcinogenic potential and are based on the World Health Organization (WHO/IPCS, 1998) scheme, as follows:

Carcinogenic PAH Compound	PEF
Benz[a]anthracene	0.1
Benzo(b+j)fluoranthene	0.1
Benzo[k]fluoranthene	0.1
Benzo[ghi]perylene	0.01
Benzo[a]pyrene	1
Chrysene	0.01
Dibenz[a,h]anthracene	1

**TABLE A-4. SURFACE SOIL REMEDIATION GUIDELINE VALUES FOR COMMERCIAL LAND USE - ALL EXPOSURE PATHWAYS**

This table must **not** be used for Tier 1 assessment and remediation, required due to land use considerations (see Sections 3.2 and 5.1.1). Tier 1 soil guidelines are found in Tables 1, 3 and 4. This table is provided to assist Tier 2 guideline development, using the procedures outlined in the companion Tier 2 document (ESRD 2007 as amended).

Indeno[1,2,3-c,d]pyrene	0.1
-------------------------	-----

- d. The B[a]P Total Potency Equivalents (TPEs) calculated for specific soil samples using Potency Equivalency Factors (PEFs) should be multiplied by an Uncertainty Factor of 3 when evaluating PAH mixtures associated with creosote or coal tar-type environmental releases, prior to evaluating against the human health direct contact soil remediation guideline.
- e. The Index of Additive Cancer Risk (IACR) is calculated by dividing the soil concentration of each carcinogenic PAH by its Protection of Domestic Use Aquifer guideline value to calculate a hazard a hazard index for each PAH and subsequently summing the hazard indexes for the entire PAH mixture, as follows:

Fine Soils:

$$IACR = \frac{[Benz(a)anthracene]}{6,4} + \frac{[Benzo(b + j)fluoranthene]}{3,0} + \frac{[Benzo(k)fluoranthene]}{0,64} + \frac{[Benzo(g, h, i)perylene]}{130} + \frac{[Benzo(a)pyrene]}{7,0} + \frac{[Chrysene]}{40} + \frac{[Dibenz(a, h)anthracene]}{4,4} + \frac{[Indeno(1,2,3 - c, d)pyrene]}{51}$$

Coarse Soils:

$$IACR = \frac{[Benz(a)anthracene]}{12} + \frac{[Benzo(b + j)fluoranthene]}{5,8} + \frac{[Benzo(k)fluoranthene]}{1,2} + \frac{[Benzo(g, h, i)perylene]}{250} + \frac{[Benzo(a)pyrene]}{14} + \frac{[Chrysene]}{78} + \frac{[Dibenz(a, h)anthracene]}{8,5} + \frac{[Indeno(1,2,3 - c, d)pyrene]}{98}$$

- f. Overall guideline value for ecological receptors only.
- g. Guideline for protection of aquatic life is below detection limit, groundwater monitoring is required.
- h. Expressed as toxic equivalents (TEQs) based on 2,3,7,8-PCDD (See CCME, 1999 and updates)
- i. Guideline values adopted directly from CCME (1999 and updates) without change.
- j. Analytical methodology specified in the Soil and Groundwater Remediation Guidelines for Monoethanolamine and Diethanolamine (AENV, 2010), or equivalent, must be used. See AENV (2010) for further details.
- k. Eco-contact guidelines from Stantec (2012).
- l. Eco-contact guidelines from Stantec (2008.)
- m. Boron must be measured in a saturated paste extract prepared in accordance with Method 15.2.1 (Carter and Gregorich, 2008).
- n. Guideline for protection of aquatic life (fine soil) is based on a groundwater guideline of 0.10 g/L. See Appendix B for more information

BDL - Below detection limit

NGR - no guideline required, calculated value >1,000,000 mg/kg; or for PAH groundwater protection, calculated value results in groundwater concentration greater than solubility

**TABLE A-5. SURFACE SOIL REMEDIATION GUIDELINE VALUES FOR INDUSTRIAL LAND USE - ALL EXPOSURE PATHWAYS**

This table must **not** be used for Tier 1 assessment and remediation. Tier 1 soil guidelines are found in Tables 1, 3 and 4.

This table is provided to assist Tier 2 guideline development, using the procedures outlined in the companion Tier 2 document (ESRD 2007 as amended).

Notes:

- a. For more information see Guidelines for Landfill Disposal of Sulphur Waste and Remediation of Sulphur Containing Soils (AENV, 2011)
- b. True total barium as measured by fusion-XRF or fusion-ICP. For more information see Soil Remediation Guidelines for Barite: Environmental Health and Human Health (AENV, 2009)
- c. Human health direct soil contact guidelines for carcinogenic PAHs are based on B[a]P Total Potency Equivalents (TPE). TPEs are calculated by multiplying the soil concentration of individual carcinogenic PAHs by a standardized Benzo[a]pyrene Potency Equivalence Factor (PEF) to produce a Benzo[a]pyrene relative potency concentration, and by subsequently summing the relative potency concentrations for the entire PAH mixture. B[a]P PEFs are order of magnitude estimates of carcinogenic potential and are based on the World Health Organization (WHO/IPCS, 1998) scheme, as follows:

**TABLE A-5. SURFACE SOIL REMEDIATION GUIDELINE VALUES FOR INDUSTRIAL LAND USE - ALL EXPOSURE PATHWAYS**

**This table must not be used for Tier 1 assessment and remediation.** Tier 1 soil guidelines are found in Tables 1, 3 and 4.

This table is provided to assist Tier 2 guideline development, using the procedures outlined in the companion Tier 2 document (ESRD 2007 as amended).

Carcinogenic PAH Compound	PEF
Benz[a]anthracene	0.1
Benzo(b+j)fluoranthene	0.1
Benzo[k]fluoranthene	0.1
Benzo[ghi]perylene	0.01
Benzo[a]pyrene	1
Chrysene	0.01
Dibenz[a,h]anthracene	1
Indeno[1,2,3-c,d]pyrene	0.1

- d. The B[a]P Total Potency Equivalents (TPEs) calculated for specific soil samples using Potency Equivalency Factors (PEFs) should be multiplied by an Uncertainty Factor of 3 when evaluating PAH mixtures associated with creosote or coal tar-type environmental releases, prior to evaluating against the human health direct contact soil remediation guideline.
- e. The Index of Additive Cancer Risk (IACR) is calculated by dividing the soil concentration of each carcinogenic PAH by its Protection of Domestic Use Aquifer guideline value to calculate a hazard index for each PAH and subsequently summing the hazard indexes for the entire PAH mixture. For example, the IACR for coarse textured soil would be calculated as follows:

Fine Soil:

$$IACR = \frac{[Benz(a)anthracene]}{6.4} + \frac{[Benzo(b+j)fluoranthene]}{3.0} + \frac{[Benzo(k)fluoranthene]}{0.64} + \frac{[Benzo(g,h,i)perylene]}{130} + \frac{[Benzo(a)pyrene]}{7.0} + \frac{[Chrysene]}{40} + \frac{[Dibenz(a,h)anthracene]}{4.4} + \frac{[Indeno(1,2,3-c,d)pyrene]}{51}$$

Coarse Soil:

$$IACR = \frac{[Benz(a)anthracene]}{12} + \frac{[Benzo(b+j)fluoranthene]}{5.8} + \frac{[Benzo(k)fluoranthene]}{1.2} + \frac{[Benzo(g,h,i)perylene]}{250} + \frac{[Benzo(a)pyrene]}{14} + \frac{[Chrysene]}{78} + \frac{[Dibenz(a,h)anthracene]}{8.5} + \frac{[Indeno(1,2,3-c,d)pyrene]}{98}$$

- f. Overall guideline value for ecological receptors only.
- g. Guideline for protection of aquatic life is below detection limit, groundwater monitoring is required.
- h. Expressed as toxic equivalents (TEQs) based on 2,3,7,8-PCDD (See CCME, 1999 and updates)
- i. Guideline values adopted directly from CCME (1999 and updates) without change.
- j. Analytical methodology specified in the Soil and Groundwater Remediation Guidelines for Monoethanolamine and Diethanolamine (AENV, 2010), or equivalent, must be used. See AENV (2010) for further details.
- k. Eco-contact guidelines from Stantec (2012).
- l. Eco-contact guidelines from Stantec (2008).
- m. Boron must be measured in a saturated paste extract prepared in accordance with Method 15.2.1 (Carter and Gregorich, 2008).
- n. Guideline for protection of aquatic life (fine soil) is based on a groundwater guideline of 0.10 g/L. See Appendix B for more information

BDL - Below detection limit

NGR - no guideline required, calculated value >1,000,000 mg/kg; or for PAH groundwater protection, calculated value results in groundwater concentration greater than solubility.

**TABLE A-6. SUBSOIL REMEDIATION GUIDELINE VALUES FOR NATURAL AREA LAND USE - ALL EXPOSURE PATHWAYS (BTEX AND PHC ONLY)**

This table must **not** be used for Tier 1 assessment and remediation, unless required due to land use considerations (see Sections 3.2 and 5.1.1). Tier 1 soil guidelines are found in Tables 1, 3 and 4.

This table is provided to assist Tier 2 guideline development, using the procedures outlined in the companion Tier 2 document (ESRD 2007 as amended).
